SYMPTOMS. TOTAL SYMPTOMS: The symptoms of Catarrh, as they generally appear are at first very slight. Persons find they have a cold, that they have frequent attacks, and are more sensitive

to the changes of temperature. In this condition, the nose may be dry, or a slight discharge, thin and acrid, afterwards becoming thick and adhesive. As the disease becomes chronic, the discharges are increased in quantity and changed in quality; they are now thick and heavy, and are hawked or coughed off. The secretions are of-fensive, causing a bad breath; the voice is thick and nasal; the eyes are weak; the sense of the smell is lessens or destroyed; deafness frequently takes place. Another common and important symptom of Catarrh is, that th person is obliged to clear his throat in the morning of a thick or slimy mucus, which has fallen down from the head during the night. When this takes place the per-
